

Trefort School in the heart of Budapest

Introducing micro:bit to Trefort School

On 05.04.2017 Experience Workshop was in Trefort School. These kids were already well-trained programmers in Scratch, so they were familiar with the pxt editor, therefore we have examined the text-based micropython programming environment.

In the classroom the table was a real tech mess. The kids wanted to learn to make a mobile selfie maker application. After the workshop some of them stayed in the room to learn more about micro:bit
